

# F50 motorized iris kit

Flexible iris adjustment

The F50 motorized iris kit is a complete solution that includes the F50 lens support. The stepper motor offers an accurate and repeatable iris adjustment. Power supply and communication is managed by the included USB cable. The F50 projector automatically detects the Iris Kit and enables iris control from the GUI.

No additional cables are needed from the control system as network control is transferred over the USB interface.

The F50 motorized iris kit is compatible with the EN51, EN55, and EN56 lenses.
