

# Project validation

Validation by Barco experts to guarantee compliance with best practices

With many years of experience in installing and deploying visualization solutions, Barco knows how to tackle even the most complex projects. In this way, we have developed a large number of best practices we think any project should comply with.

Barco's Project validation service helps you validate requirements, system design and installation, and helps you to put the visualization solution into operation in an optimal way.

**We solve:**

- System not answering to requirements
- Issues with incorrect cabling or other backbone equipment
