

Cineo35 2.5k

2.5K projector

The cineo35 2.5k offers full 2.5k (2,560 x 1,600 pixels) resolution and is very compact. It has been designed for post production – where color accuracy and resolution are two of the most important requirements. It fits in small and medium-sized suites and collaboration rooms, and provides unaltered imaging for lifelike projection on screens up to four meters wide, as an alternative to grade 1 environments. It comes in two versions, either with traditional lamps, or with LED illumination. Its color rendition and accurate calibration, combined with low noise, makes it perfect for use in small rooms, where distraction levels must be kept at a minimum.

DLP® technology

A DLP based projector for post production provides the same technological footprint and viewing experience as the DLP Cinema™ environment, making sure what you see in post is what you see in exhibition. Most importantly – DLP technology provides unmatched reliability, and does not degrade over time.

High resolution lenses

All projection lenses for the cineo35 2.5k are custom-designed. Using aspherical elements and enhanced Low Dispersion glass provide sustained high contrast, accurate color rendition and lack of aberrations, and above all – excellent sharpness – for unsurpassed image quality.
