

Electronic Meal Ordering software

Software for interactive patient care

In today's healthcare environment, empowering patients with tools to personalize their stay is the key to delivering a better care experience while improving operational efficiencies.

The Electronic Meal Ordering software has been designed to realize the benefits of electronic ordering by combining Datasym's best-in-class menu/food ordering system with Barco's JAO bedside terminals.

The service alerts patients to the latest menu and time to order, and presents them with an easy-to-use menu selection process. Their choice is then submitted instantly to the catering department for fulfillment.

Your benefits?

- Save costs by eliminating menu order cards and associated expenses
- Reduce food wastage by moving meal order cut-offs nearer to food delivery times
- Improve care experience and increase satisfaction by allowing patients to choose their meals and providing them with a wider menu choice
- Save time and resources through advanced self-service capabilities
