

When your meeting does not go smoothly...

What tech issues in the meeting room give you a headache?

No matter the setup of the space or the tech in the room, having a meeting should be stressfree. Yet, technology can sometimes get in the way. Here are the most frustrating issues meeting hosts and participants encounter in rooms equipped with in-room systems like Zoom Rooms or Microsoft Teams Rooms.

Ever tried having a Zoom call in a Microsoft Teams Room? How do I even start doing that?

We can't both share content at the same time, with only one cable in the room.

I want to share from my tablet to the room display, but there's no way to connect the cable to my tablet. Why can't I just use Airplay?

I don't feel very welcome. I have to join a video meeting, as a guest before I can share content on the room display and can't access the company network.

Welcome guests in the meeting room

SHARE CONTENT ???

Unplanned meetings with a fixed room system take time to set up. I can't share content easily if I haven't booked the meeting upfront.

Have an unplanned meeting

Have a face-to-face meeting in a room with a fixed video-conferencing setup

I can't wirelessly share my presentation on the room display without joining a call on the room system and making sure I don't create audio echoes.

Don't worry, there are wireless collaboration solutions that help you improve the user experience in a fixed room. Curious?
