# Page Editor

Software for content creation

### Easy content creation

The Page Editor offers all the necessary tools to create attractive and dynamic content for your display information system, from basic texts and images to videos, flash and interactive objects. Page Editor is based on a 'What you see is what you get' user interface. Creating and modifying ad hoc messages on the fly and adding transition effects to playlists is easy.

### Integrate and collaborate

Page Editor allows the user to drag and drop files anywhere from the computer and with the grid function objects can easily be positioned in the canvas. Objects can also be linked with any database, enabling real-time updates on your displays. Multimedia source components can be shared to create pages amongst different people working on the same playlist.

### Supporting multiple formats

MPEG video formats for information display systems are supported and different flashes can be played together. Page Editor even supports TV and streaming video. Links with external content databases like SQL®, Oracle®, XLS, CSV, TXT, etc. is possible and also record filtering is included. The Page Editor is freeware for its users.

User-friendly

- What you see is what you get

What you see is what you get

- Advanced features to make attractive presentations (transition effects, text tickers, video overlay...)

- Videomode Presets for all current resolutions/screens on the market (landscape & portrait)

**BARCO**

02
