

I600 dust filter

The re-usable and cleanable dust filter is an optional accessory for I600, designed to protect the internal components. This dust filter is installed on the air inlet side (front) of the projector, effectively preventing dust and other airborne particles from entering the device. By maintaining a cleaner internal environment, the front filter helps to prolong the lifespan of the projector when used in locations with high levels of dust and debris. The filter can easily be cleaned for re-usage.

Available soon.
