Running high-impact video walls has never been this easy. The LED NT series offers sharper images through Infinipix® Gen2 processing power, a thin tile that is therefore lighter, simplified mounting for easier maintenance, smarter connections for enhanced quality and operation, and good low-light performance.

Superb image quality

With no visual distortion, low latency and perfect syncing, applications from boardrooms and lobbies to control rooms and broadcast can now enjoy high-quality viewing for all types of content. This also requires perfect color accuracy at every level of brightness, which is maintained by Infinipix® Gen2. The embedded proprietary Smart CalibrationTM also ensures wide color gamut support for rich and true-to-life images.

Easy maintenance and serviceability

The thin tiles contribute to the product's versatility and ease of installation. This lowers the wall's footprint and broadens the possibilities for set-ups at different locations, enabling better integration into existing spaces. The accessibility from both front and back drastically improves the ease of maintenance. What's more, Barco's Video Wall Manager software automatically configures the different tiles, which greatly speeds up the installation process.
