

XLite Toolset

The XLite Toolset software package is an integrated toolset which enables the configuration and control of a wide range of displays and related products.

- Initial installation of a display system
- Uses 'auto-detect' functionality to discover the connected devices
- Possibility to use default settings for the devices
- Configuration of every device as a separate entity (a D320, a tile, an AEC,...)
- Configuration of the system as a whole (wall settings, addressing, window positions,...)
- Possibility to load and save configurations
- Updating of software and firmware of each device
- For D320 maintenance is handled by Version Control Manager
- Provides simple and basic features to control the Display system
- The user can store window settings (position, size and z-order) and recall it in a split second
