AutoAlign

A powerful tool to automatically re-align Barco's visual display systems

Setting up and maintaining a multiple projector display system can be a daunting and time-consuming task. Barco's new AutoAlign suite, fully integrated for the simulation markets, provides an automated re-alignment system for projection displays. It enables you to quickly and easily maintain a multiple projector system with minimal user intervention, assures consistent image quality over time, and guaranees Barco quality on color and resolution. Advanced technology allows you to perform repeatable and accurate re-alignments that exceed typical human performance standards.
