

Canvas

Virtual reality solution for meeting rooms

- **Serving needs of both Group VR sessions and regular meetings**
- **Immersive set-up with 3 screens positioned under 135° angle**
- **Brilliant image quality showing all the important details**
- **High flexibility to switch between use modes**
- **Sharing your content on the fly with ClickShare**

Barco's canvas is the first Virtual Reality (VR) solution designed for meeting rooms. The canvas has a large screen surface that can be used both for regular meetings and for interactive group VR sessions using regular see-through 3D glasses. In this way, the canvas is one investment that suits 2 purposes.

The canvas brings together many of Barco's unique strengths. The combination of the famous image quality of our projectors and the superb performance of our light-weight RigiFlex screens brings both 2D and 3D imagery to life in the most optimal way. Furthermore, Barco's renowned E2 VR image processing combined with ClickShare allow to arrange your data in the most optimal way to support your various workflows; all with a simple click of a button.

Delivering outcomes that make a difference, in any market

Barco's canvas delivers great outcomes in many different markets. In AEC (Architecture, Engineering and Construction), it helps your sales team to sell more and convince your customer. During your project execution it allows to get better insight during project meetings, allowing to meet budget and time. Oil & Gas companies can talk about new locations on a map, depict expected production tables and evaluate the technical drilling angles in 3D. And in Automotive, executives can both evaluate the new car designs and go through all other aspects of the model's introduction. But also other industries can benefit from the canvas... the possibilities are nearly limitless!
