

Patient Media software

Patient Media software for interactive patient care

Service differentiation is becoming increasingly important in a highly competitive healthcare market. To optimize the care experience, healthcare providers go the extra mile to cater to their patients' needs.

Patient Media software provides patients with high-quality entertainment and communication services at the bedside to improve their hospital stay. The software is easy-to-use and offers self-service access, including easy payment options, to a host of services that have become commonplace in life outside the hospital.

Your benefits?

- Manage patient communication needs more effectively by enabling direct communication via Internet, chat, VOIP...
- Allow patients to take a more active role in the care process through health information content
- Give patients a home-like experience and improve satisfaction scores
- Maximize return by pushing profitable value bundles
