Information portal (JAO SW-CL-IPO)

Bedside computing software for patient communication

Better patient communication

The hospital can use the patient information portal for patient communications, i.e. to tell them about various events in the hospital. Specific patient information content in the form of animations or films can also be provided for patients to access individually.

The hospital's own Intranet can be incorporated using Html or Flash.

Barco's Information portal software offers:

- Hospital-specific information management options

- Message box on start page

- Pop-up message boxes

- Billing options (overview of purchased packages)

Barco's bedside computing software is ideal for use on its JAO Smart Terminal range and runs on a wide variety of hardware and third party systems.
