

ILite Precision Rental Structure

ILite Precision frame offers more precision and durability.

Barco introduces an ILite Precision Rental frame (R9850612) for the ILite 6XP solution. This precision rental frame offers more precision and more durability as a result of the modifications listed below:

- use of more accurate material
 - more accurate positioning of the structure within the display and of the tile within the structure.
 - double number of mating faces
 - seam conserter included
 - reinforcement plates at both sides
 - redesign of locking handles
- For the ILite 6XP LED walls, the ILite Precision Rental Structure is now the only rental Frame available. For the ILite 8, ILite 10 and ILite 12 we recommend the existing rental structures.
