Clinical Access software

Software for interactive patient care

Improving quality of care and encouraging patient involvement are high on the healthcare agenda. By giving healthcare workers access to a wide range of applications directly at the bedside, Clinical Access software helps improve clinical workflow and productivity, freeing up time and resources to spend on actual patient care.

Clinical Access software provides a user-friendly IT platform from which hospital staff can access a range of applications – including PACS, HIS, EMR, blood results, e-pharmacy and patient admission systems – directly at the bedside.

Your benefits?

- Retrieve medical information where it matters most: at the point of care

- Ensure patient safety through easy and secure access to any system in the hospital

- Free up time and resources to spend on actual patient care

- Improve the patient experience through personalized care at the bedside
